

FEEDING CHART

PROGRADE

LIQUID FEED

2-PART

| Mixing Order | Units | Vegetative | | | Flowering | | | |
|-------------------|-----------|--|------------|------------|------------|------------|-------------|-------|
| | | Clone | First week | Every week | Week 1 - 2 | Week 3 - 6 | Week 7 - 8+ | Flush |
| COREX (A) | ml./L | 2.8 | 4 | 4 | 4 | 4 | | |
| ELDEX (B) | ml./L | 2.8 | 8 | 8 | | | | |
| FLOREX (B) | ml./L | 2.8 | | | 8 | 8 | 8 | |
| FLO FADE | ml./L | | | | | | 4 | |
| AURORA | ml./L | | | | 2 | 4 | 2 | |
| TERRA | g./L | 0.1 | | | | | | |
| OXY ROOT | ml./L | 0.5 - 1 ml. All stage | | | | | | |
| MIRA UP | ml./L | 0.1 - 1 ml. All Stage, Use to increase pH, check pH value as need | | | | | | |
| | Target EC | 1.8 | 2.8 | 2.8 | 3.2 | 3.7 | 2.5 | |
| | PPM 500 | 900 | 1400 | 1400 | 1600 | 1850 | 1250 | |
| | PPM 700 | 1260 | 1960 | 1960 | 2240 | 3330 | 1750 | |

| พืชมงคล / สารอาหาร | | Vegetative | |
|--------------------|-------|------------|--|
| Mixing Order | Units | Every week | |
| TERRA | g./L | 0.1 | |

Check pH and EC every time
 To ensure accurate fertilizer mixing
 Optimal pH range is between 5.5 - 6.5

pH too low:
 1. Reduce concentration to match water used
 2. Use **MIRA UP** to increase pH

pH too high:
 1. Increase fertilizer concentration

Concentrated Liquid Fertilizer

Dissolving Powder Fertilizer into Liquid Fertilizer

Transform powder fertilizer into concentrated liquid fertilizer for convenient and flexible use. The liquid form can be stored for extended periods, making it ideal for use with dosing systems like Dosatron or various inline injection systems. This ensures precise mixing and delivery of fertilizer, maximizing efficiency in every application.

| CONVERTER | |
|-----------|-------|
| kg. | Liter |
| 0.25 | 1.00 |
| 1.00 | 4.00 |
| 3.00 | 12.00 |
| 12.00 | 48.00 |
| 24.00 | 96.00 |

Example of 250 Grams into Liquid

Here's a guide to dissolving 250 grams of powder fertilizer to create 1 liter of concentrated liquid fertilizer. This preparation is ready for use with systems like Dosatron or inline injection systems, ensuring convenient and precise mixing and fertilizer delivery.

1. Prepare a 1-liter container and fill it with water up to 50% of its capacity (approximately 500 ml).

2. Add 250 grams of KING WHALE fertilizer into the container until the entire packet is emptied.

3. Stir the mixture until the fertilizer is fully dissolved. This process typically takes 15-45 minutes. After dissolving, let it sit for a while, and the water will become clearer.

4. Add more water until the level reaches 1 liter to create a 1-liter batch of concentrated fertilizer. Store it for future use.
